

ABSTRACT

An electronic apparatus is designed for conversion from a portable computer configuration to a flat panel television configuration. The electronic apparatus comprises (i) a body having a first edge and a second edge, (ii) a display housing, (iii) a display adjustment unit, and (iv) a display support unit. The display adjustment unit is coupled to the display housing and is rotationally coupled to the body proximate to the first edge of the body. The display support unit is rotationally coupled to the body proximate to the second edge of the body, and when rotated, supports the display housing.
